

KANNEGIESSER ETECH MATERIAL HANDLING SYSTEMS: BECAUSE EVERY DETAIL MATTERS.

A well-designed logistics operation helps you realize efficiencies at every step of your process. That is why Kannegiesser ETECH has continued to innovate for over 50 years.

That innovation is built into every aspect of Kannegiesser ETECH's newest generation of products. Our eRail systems and eVue software systems are designed, customized, programmed and supported by people who understand the daily challenges of all types of laundries—healthcare, hospitality, linen supply, industrial and textile manufacturing.

SERVICES AND CAPABILITIES

We combine engineering and experience to provide the best solution. Our extensive industry knowledge is backed by our superior software, engineering, manufacturing, and installation capabilities. Count on us for the most innovative products and expert service.

- Sales Engineering
- Mechanical and Equipment Engineering
- Project Management
- Manufacturing and Assembly
- Software Design
- Installation
- System Commissioning
- Training
- Parts Sales
- 24/7/365 Support

SYSTEMS AND SOLUTIONS

Kannegiesser ETECH thinks of everything from the optimal footing for your workers to the easiest user experience for your software. The result is innovative, seamless, optimized, integrated, end-to-end material handling solutions shaped by our experience and built around your workflow. Here are some of the solutions we consider.

Sorting Solutions

- **CONTINUOUS SORT-ON-RAIL:** Highest volume option.
- **SORT ON RAIL:** For higher volume continuous sorting with hopper capacity options.
- **LOAD ON RAIL:** Operators or drivers at the loading dock can load materials (such as mats) directly

from the truck into slings on the monorail rail system.

- **BIN-TO-BELT SORT:** For a smaller space that processes many low-volume items.
- **CART SORT:** Handle lower-volume sorts manually without costing additional labor.

“We see the benefits from our dual Continuous and Bin-to-Belt sorting decks, more automation means we can process more items with less manual handling of soiled linen. The new sorting area in our Livingston plant is a big step forward in automation and that makes the entire process allot faster and safer for everyone.”

—Jim Hernandez – Emerald Textiles Director of Engineering

Washer Loading System

A monorail system frees up floor space by getting wash loads overhead, while automatically delivering the right product to the right washer, with an accurate load size, at the right time.

Dryer Loading Sling System

Cakes transfer directly from the press to a sling and into a dryer loading loop. When a dryer is ready, the sling automatically transfers the cake onto a conveyor which loads the dryer, allowing loads from any tunnel to go to any dryer, and offering flexibility for future additions.

Clean Delivery Systems

Automatically transfers dryer loads to slings on the rail system, with reduced labor and more open space.

A Full Range of Solutions:

- Cart Dumpers
- Carts
- Break-Up Tables
- Conveyors
- Impact Tables
- Cake Breakers

MATERIAL HANDLING CONTROLS

Kannegiesser ETECH's eVue software puts an endless stream of production data at your fingertips. Choose from operator interfaces and dashboards, text alerts, apps and emailed reports to stay informed.

eVue Control

A reliable, secure & intuitive web-based system to:

- Balance Workflow
- Organize Inventory
- Maintain Performance
- Establish Accountability

eVue Metrics

Provides accurate, clear and real-time reporting to:

- Inform Decision-Makers
- Inspire Employees
- Alert Maintenance

eVue Labor

Tracks real-time machine and employee productivity to:

- Benchmark Processes
- Establish Goals
- Evaluate Results
- Educate Employees
