

WINDUP FOLD TABLE (WUFT)

Automatically lift and move linen towards
the folding operator

Wind Up Fold Tables

Our innovative Wind Up Fold Tables help operators automatically lift and move linen towards the folding operator. Our designs featured in a single sided or double-sided option will boost operator efficiency by reducing operator fatigue and excessive bending.

Load our tables by eRAIL monorail or other overhead delivery systems to increase dryer-to-finishing efficiencies and energy savings.

Engineered with a 1 horsepower motor, coupled with a 400 lb capacity nylon hopper bed, and an optional 5'2" X 1'6" or 62" X 18" folding surface makes the Kannegiesser ETECH's Wind Up Fold Table the best choice in folding table equipment for hand folding or for providing goods for operators at small piece folders.

When necessary for systems with an overhead logistics rail system a loading chute is available, to bridge the gap between the bag and the windup fold table, as seen on the cover image.
